The Art of Medallions

These jewels of the ceiling have been around for a long time and are the focal point of interior design. In the early homes of distinction, they were hand crafted in plaster then painted or foiled with gold in only the palaces of the elite. As an applied delicate ceiling motif, it took artisans hundreds of hours to create and install these gems by hand.

Finally, a less complicated idea allowed the medallion to be cast from plaster as a whole piece and actually be plastered into place on the ceiling as one unit. This allowed for the mass production of this magnificent art form making it available to the average home at a fraction of the original cost of the hand crafted masterpieces.

Technical progress and urbanization resulted in more people having medallions in their own homes. Ceiling heights were lower than that of the larger palaces of royalty, thus the chandeliers were hung closer to the ceiling. This became a problem particularly with the proximity of the candle flame to the ceiling above. The whole piece plaster medallion became an excellent, economical way to create a non-combustible fire barrier between the ceiling and the open flames. It even allowed for wall paper to adorn a ceiling with less fear of fire. The introduction of gas lamps, although safer, still required a heat and fire barrier just as the candles did in earlier times.

As the electric age dawned, medallions became less of a functional entity and more of an anchor for ceiling decoration. Now available to all, through mass production, these gems of ceiling decor are economical and easy to install. Plaster requires professional installation, so producers have made them from lite weight ArchPolymer™. This synthetic wood installs with glue and looks like detailed plaster at a fraction of the cost.

Our collection can be made from NeoPlaster™ in order to provide the necessary ASTM-E84 non combustible fire rating for commercial applications. You can also order the ArchPolymer™ medallions treated with a fire retardant primer that provides 2 hrs of protection.

As a major element of interior design, medallions have evolved from delicate rococo spider lines, to the heavier acanthus leaves, to the elegant lines of the Federal period, to the modern waves of Art Deco. Today they are the focal point of interest in a room, create an illusion of height, and are a major element setting the style of the room.

At Martin RichardsDesign™ we try to incorporate the various traditional elements in a more modern context. The medallion above, IPMRD8002, combines the traditional egg and dart molding with acanthus leaves in a symmetrical layout. The four baguettes enhance the three dimensional effect. This wonderful design has three similar matching sizes. For those that are looking for the modernism that was expressed in the Art Deco period, we created IPMRD8012 or IPMRD8014 ovals.

The graduated ovals are smooth and can appeal to many modern collections. Our new rectangle medallion has over 30 metal inserts and holes can be drilled anywhere on the surface area.

The ceiling medallion is a truly brilliant gem that has evolved from pure decoration, to fire protector, to the epicenter of a room's style.

Plain-Colonial

For those that want a modern clean look, Imperial has a large variety of medallions for ceilings and walls. The colonial style represents the simplicity of the 1700's over the more complicated European styles. Colonial Medallions are flat surfaced with concentric rings. For a fun look paint the rings a different color.

Installation Notes

Ceiling Medallions

Martin Richards Design™
COLLECTION

Note: Always use a professional certified electrician to install any electrical device that must be hard wired. These notes are guidelines only. For your situation, consult a professional and adhere to local building codes.

1) **Weights:** Medallions are decorative only and do not hold weight. Any fixture must be hung by the electrical receptacle threaded rod. For heavy fixtures, re-enforce the ceiling rafters to hold the weight.

2) **Power:** Make sure there is no power to the receptacle box. Turn off the breaker and confirm with an electric tester.

3) **Mark the Spot:** Hole the medallion center to the receptacle box and trace out the outside of the medallion on the ceiling.

4) **Preparation:** Lightly sand and remove all dust or popcorn plaster (stucco) from the ceiling prior to install to ensure a flat surface.

5) **Hole:** Order your medallion with a pre-cut specified hole or drill a hole yourself ensuring it is slightly larger than the size of the receptacle box.

6) **Paint the medallion before you install** - allow 24 hrs to dry

7) **Apply the Adhesive.** Use approved adhesive only that is safe for ArchPolymer™ - put multiple small blobs on the back side of the medallion. Use this same adhesive for Neo-Plaster-GRG.

8) **Use 4 screws to temporarily hold the medallion or preferably use a brad nailer to affix the medallion to the ceiling.** Use only a few brad nails as they are just holding the medallion till the adhesive dries. In the case of Neo-Plaster-GRG use screws only and countersink them to be filled later.

9) **Check to make sure the medallion is level on all sides.** If it is not use a small wedge to pry one side downward until all sides are even. This is the time to correct any unevenness. Make sure you have pulled the wires through the center hole.

10) **Allow to dry for a few hours or overnight.**

11) **Fixing the gap between the medallion and the ceiling.** Apply the Vinyl Spackling compound with your finger or a small flat trowel to the edges of the medallion. Let dry and sand lightly or wet sand during application. **DO NOT** use caulking. Caulking tends to dry out over time and shrinks. The vinyl splacking is plaster with polymers and stays flexible but can be sanded unlike caulking. Fill all countersunk screws or brad nails. Touch up with paint over spackling compound.

12) **Electrical hookup** - wires go though the threaded rod and should be installed by a qualified electrician.
